

LIFT REFURBISHMENTS

Apollo prides itself on being 'the total lift company'. The breadth and depth of our experience and expertise ensures we can deliver the best possible service to our clients across the complete spectrum of lifts – all types, all models, all manufacturers.

For over 25 years we have been providing lift refurbishment solutions to specifiers, architects, engineering consultants, building managers, managing agents and facilities managers. With operations centres in London and Leeds, we undertake projects across the UK and work across the full contract range. Typical commissions can range from simple car interior revamps to complex modernisations of multiple groups of lifts. Each one, whatever its scope, is subject to our ISO 9001 : 2000 procedures, thus ensuring that every phase – survey, specification, quote, installation – is carried out to the highest standards. In addition, Partnering is a core Apollo philosophy which we take into our work in both the public and private sector.

Our project management team maintains close liaison with site personnel to ensure smooth progress of the works and to facilitate the hand over to the client, coming in on time and on budget. On tap at all times is a rich pool of consultancy advice, industry experience and engineering excellence.

Since the Construction, Design and Management Regulations came into force in 1994, we have been able to work as a principle contractor. This is invaluable for clients as they effectively get a one stop building shop – our in-house contractors specialise in lift associated building works and so allow us to manage the whole project.

We are currently at the forefront of the industry's drive to ensure that lifts comply fully with the Disability Discrimination Act 1995, which came into force in January 2004. We have a specialist DDA team on hand to help property owners and building managers get to grips with this significant piece of legislation, with its lengthy list of specific requirements and provisions for disabled users.

Clients range from very big blue-chips to private homes with everything in between: hospitals, sheltered accommodation, housing associations, local authorities, government buildings, universities, retailers etc.

Example projects include:

- A 12 lift modernisation programme in a luxury residential development in St Johns Wood, London, where lift service had to be maintained at all times for the convenience of tenants
- The modernisation of 18 lifts over 18 months in occupied housing for a London borough
- The refurbishment of art deco style lifts in an exclusive London club
- Refurbishment projects in government buildings working under strict security controls and to very tight deadlines
- A 12 lift modernisation in a major Home Counties hospital
- Lift refurbishment within a diplomatic residence complete with the highest quality finishes and state-of-the-art control systems

NEW LIFT INSTALLATIONS

Apollo prides itself on being 'the total lift company'. The breadth and depth of our experience and expertise ensures we can deliver the best possible service to our clients across the complete spectrum of lifts – all types, all models, all manufacturers. With operations centres in London and Leeds, we undertake projects across the UK and work across the full contract range, from multiple lifts on multiple sites to a single domestic stairlift.

Over the years we have built an excellent reputation for new installation work, establishing a proven track record with architects, designers, specifiers, engineering consultants and building contractors. Partnering is a core Apollo philosophy and is an increasing feature of today's contracts.

We are registered under section 12 of the Lift Regulations 1997 (notified body Number 0037), enabling us to supply 'end-to-end' solutions from design through to test, and complying fully with the European lift directive. A particular strength is working within severe operating constraints, usually due either to building occupation during works or the need for completion within very tight timeframes.

Since the Construction, Design and Management Regulations came into force in 1994, we have been able to work as a principle contractor. Our project managers have a wealth of experience in running projects where the new lift forms between 20%-50% of the overall cost, managing builders and other allied trades. Our in-house contractors specialise in lift associated building works and can undertake any task from the simple making good of lift surrounds through to the complete construction of new lift shafts.

Our own commitment to quality and our adherence to the ISO 9001 : 2000 standards mean that every phase of a project is conducted expertly and efficiently: survey, quote, order processing, installation, test, CE marking and final handover.

Thanks to our excellent relationships with suppliers, we are able to install all sizes and types of lift and to accurately meet any desired specification. We think ahead too – our products can be maintained without the need for specialist diagnostic equipment and all spares can be sourced from within the UK.

Clients range from very big blue-chips to domestic homes with everything in between: hospitals, sheltered accommodation, housing associations, local authorities, government buildings, universities, retailers etc.

Installation capabilities include:

- Motor room less lifts
- Hydraulic passenger/goods lifts
- Traction passenger/goods lifts
- Lifts fully compliant to the Disability Discrimination Act 1995
- Scissor/platform lifts
- Multiple groups of lifts
- Bespoke lift installations
- Package lifts
